Exercise 7: Sprint Review & Retrospective

69. Sprint Review Preparation - Prepare demo environment and presentation slides

- Prepare demo environment (run project in VS Code – localhost)
- Ensure features working:

  Application submission

  Duplicate detection

  OCR verification

- Prepare PPT with:

  Problem → Solution → Demo → Results

70. Demo Agenda Creation - Create 15-minute demo agenda

1. Introduction (2 min)
2. Problem Statement (2 min)
3. System Overview (3 min)
4. Live Demo (5 min)
5. Results & Benefits (2 min)
6. Q&A (1 min)

71. Sprint Review Meeting - Present to instructor and demonstrate working software

- Demonstrate working system:
- Submit application
- Show duplicate detection result
- Show OCR verification
- Explain how Agile helped in incremental development

72. Feedback Collection - Collect feedback and new requirements

Feedback from instructor/team:

- Improve UI design
- Increase accuracy of duplicate detection
- Add more validation checks
- Enhance document verification

73. Metrics Presentation - Present sprint metrics

Show simple metrics:

Metric	Value
Features Completed	2 Core Modules
User Stories Done	10
Bugs Found	5
Bugs Fixed	4

74. Retrospective Meeting - Conduct retrospective using Starfish format

Start Doing:

- Add better validation
- Improve UI

Stop Doing:

- Overcomplicating features

Continue Doing:

- Agile sprint planning
- Team collaboration

More Of:

- Testing
- Code reviews

Less Of:

- Last-minute work

75. Action Problems Documentation - Document improvement actions

- Improve duplicate detection accuracy
- Fix OCR mismatches
- Optimize performance
- Enhance UI usability

76. Action Plan Creation - Assign responsibility and set deadlines for improvements

Task	Responsible	Deadline
Improve duplicate logic	Developer	2 days
Fix OCR errors	AI Developer	2 days
UI improvements	Frontend	1 day
Testing	Team	2 days
